Shi Wei Zheng;

Company Name: **Harborview Services**

University at Buffalo

Course Number: MGS 102

Future enhancements

Change the schedule and shift relationship. Instead of rolling schedule objects, it can be set. For example, ScheduledID 1 can be set from 4/16/2026 to Thursday for all periods, which can make schedule objects static, in turn does not break shift table due to missing periods. Furthermore, it can also be scheduled, related to the availability table.

Paycheck calculation should be computed on a different table, instead of a single query. This is because of the different currency types and different data formats and keeping track of the different numbers.

In the future, we also want to create an in-depth document detailing the system and functions that act as a manual or a handbook.

Bug report

When opening forms, it loads the first record, even if you have not selected anything on the Name selection box (combo box). To combat this, an if statement was implemented to check if the combo box is null. If so, return a warning saying, pick a name, and restrict them to interact and save the database.

Reports that fetch data from tables that have fields which have lookup properties show a dark box around the selected record. This bug can only be fixed by removing the look-up function of the field. We have accepted the bug and marked it as a limitation of Access.

When clocking in, pressing back stores the record with an empty clock-in due to it being in Data Entry mode. This is unavoidable due to limitations of Access system of rejecting changes of sub forms without changing it from Data Entry mode.

Unimplemented Features

The prototype system currently disregards the calculations of paid overtime hours and payment calculations.

The prototype system is currently missing analysis portions of the proposed system dedicated to managers. This includes reports that reveal scheduling conflicts.

Design Deviation

The Form and Report prototype design was done outside of MS Access; this means there are some differences in the design and layout of both forms and employees.

For both the Employee and Manager table, we re-configured the field type of name from list to combo box. This is due to the formatting issue caused by reports.

Clock in & clock out workflow re-configured. Instead of first selecting the name then choosing to clock in or out, for each action of clocking in and clocking out, you must independently select your name in each form.

Breakdown of Forms and Reports

The forms remain true to the original UI mockups, with new buttons and sections added to the final prototype. The primary focus was making the system easy to use while keeping the data clean. Role-based navigation secures the system, while dropdowns and date pickers enforce data integrity and prevent formatting errors. In the manager's view, sub forms efficiently manage one-to-many relationships. The final design is built for a busy kiosk, using high-contrast colors and large buttons that are easy to tap. This simple layout ensures staff can clock in and out quickly without making mistakes, even during hectic shifts.

The 4 reports were done to replicate, as close as possible to the mockups that were made in the previous phase. Translating what was made in PowerPoint to Microsoft Access proved to be really challenging, but with a lot of time and effort, it was done. The main goal is to make the reports very easy to understand for the managers. Each report is built using the ERD diagram and the flowchart, so every field is traced back to a specific source, meaning nothing is entered by hand. This keeps the data reliable and reduces the errors ExcellentNYC was experiencing beforehand. As a group, we chose to keep our project a cream and gold color scheme to create a professional, unified look that makes the system feel cohesive. Each report uses a tabular layout with clearly labeled column headers. I kept the detail rows compact and alternated background

shading between rows to help readability. I made sure all text maintains strong contrast against its background and used plain descriptive labels rather than technical field names so that any staff member can understand the report.

Breakdown / Contribution of Group

Amir: Create slide design, write-up design, spell check and finalization. Run QA and finalize.

Robbis: Create determination of Reports, Buildout reports, Design reports. Determine finalization

Belinda: Create determination of Forms, Buildout Forms, Design Forms. Determine finalization.

Abdullah: Created Macros, Created Database Queries, implement logic (Workflow) in forms, help with reports & forms, Write & Design Product writeup.

Shi Wei: Created & Filled Database, Implemented ER Relationship, Configured Table Rules & Masks, Created Database Queries, Helped with Slides & Reports.

Form Print-Out; Report Print-Out

Department Staffing Overview

Department	Manager	Total Employees	Scheduled This Week	Scheduled Today	Avg Hrs/Week	Staff Experience	Schedule Coverage %
Management	Emily Johnson	4	4	1	20.25	4.8	100.0%
Sales	John Smith	15	15	6	27	0.9	100.0%
Inventory & Warehouse	Daniel Miller	10	9	5	28	1.3	90.0%
Human Resources	David King	4	4	2	27	2.5	100.0%
Marketing	Ava Wilson	5	4	1	22.5	3.8	80.0%
